

Report Name	Developer Name	AI Assisted	Description	Features Used
Instructor Sections with Class average	Jay	N	This report shows each instructor and the courses they're teaching, along with the class average for each of those sections. It helps give a snapshot of how students are doing under different instructors. Like, if one class has super low averages, it might be worth looking into.	Joins Group Functions Single-Row Functions Restricting/Sorting
Student at Risk	Jay	N	This report breaks down how many students are either expelled, suspended, or on academic probation, grouped by the school they're in (like Business or Engineering) and the credential they're taking (like Finance or Civil). It's useful for spotting which programs have more students struggling.	OLAP Joins
List Students by Inputted Course	Jay	N	This report asks the user to enter a course code, then shows a list of all the students who've taken that course. It includes their names and the semester they took it. It's a super quick way to look up who was enrolled in a specific class without having to dig through everything manually.	User input Joins
High Performing Students by Credential	Jay	Y	This one's for finding students who are doing better than their classmates. It compares each student's average grade to the average grade of everyone else in the same credential program. If their average is higher than their program's average, they show up in this list. It's good for finding honor students or students deserving of a scholarship.	Subquery Joins Group Functions Single Row Functions
